JOB EXECUTOR

A fully supported, cost-effective, & enterprise level workload automation service in the cloud.

POWERED BY elyzium

Effective job scheduling is key to the success of it within any business. Historically, organisations ran batch jobs overnight by shutting down online systems outside of business hours. In today's 24/7 economy however, taking systems offline for even a few minutes is unthinkable for any business – affecting not only their ability to compete, but ultimately their bottom line.

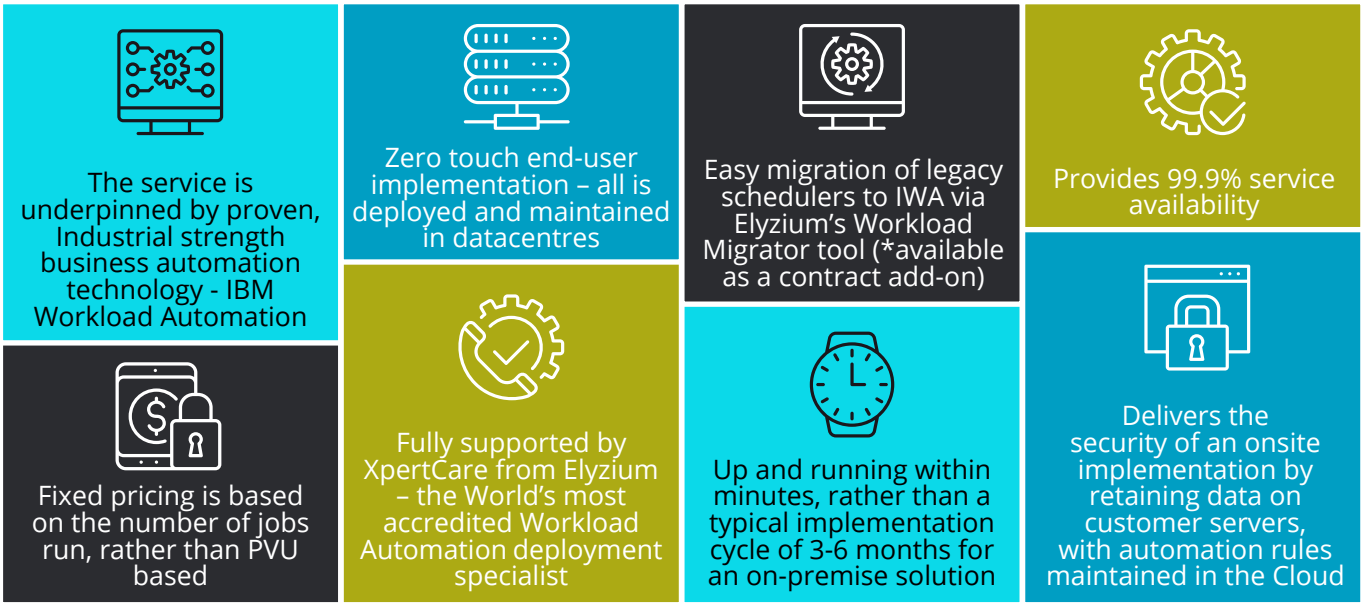

This has resulted in job scheduling evolving into Workload Automation; an event driven solution which integrates processes between applications in real-time. Despite the multiple business benefits on offer however, many organisations are yet to implement a consolidated Workload Automation platform, with initial hardware and software investment, ongoing operational costs and long term ROI being the prohibitive factors most commonly cited. As a result many businesses still have multiple job schedulers in place, and must deal with the problems this complexity brings on a daily basis.

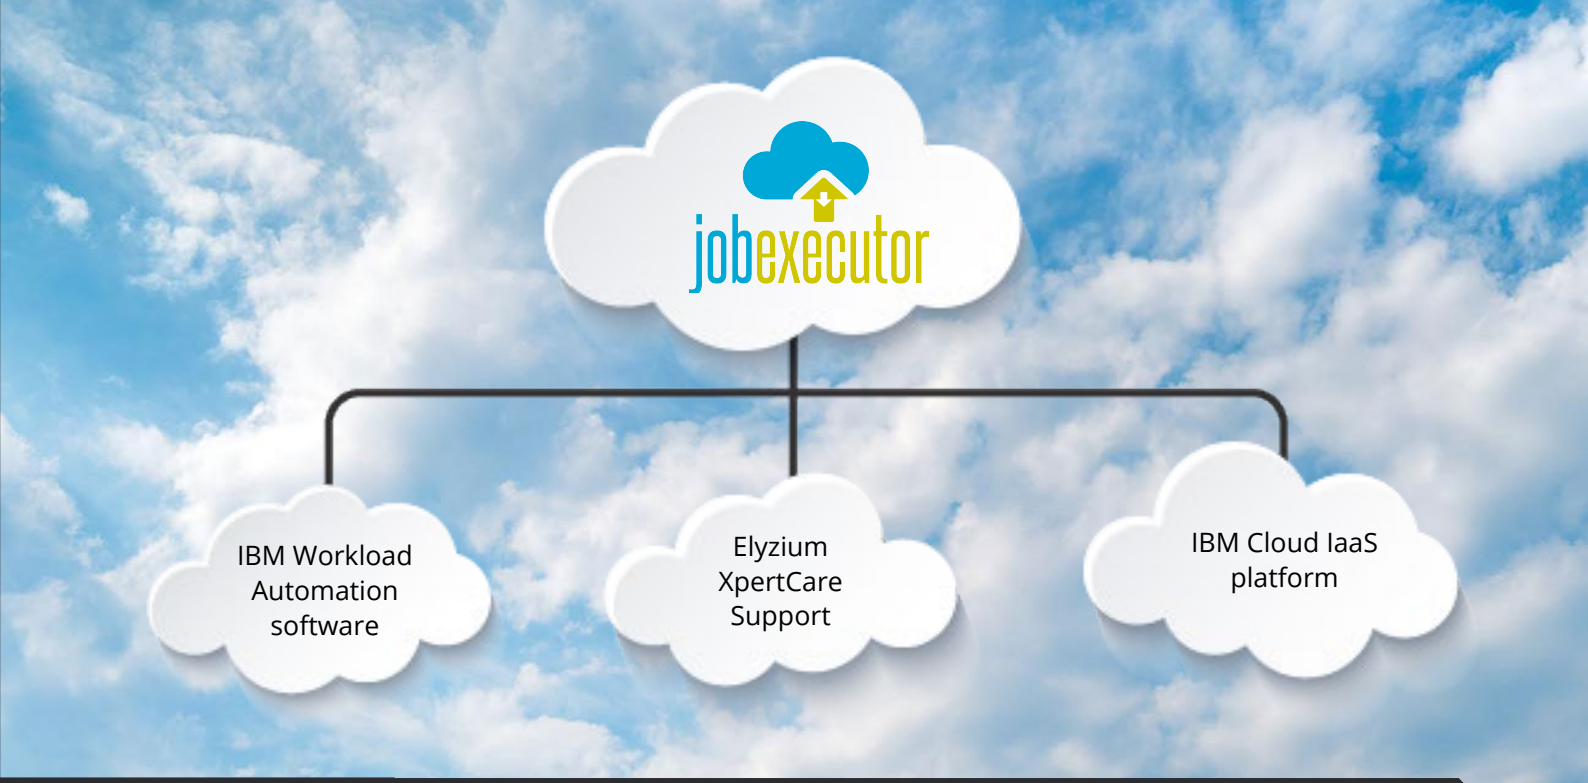

WHAT IS JOBEXECUTOR?

JobExecutor.com addresses the challenge by providing a competitively priced, subscription based, enterprise-class Workload Automation service in the Cloud. Powered by IBM's Workload Automation software (formerly Tivoli Workload Scheduler) – proven technology used successfully by thousands of enterprises Worldwide – JobExecutor's Software-as-a-Service (SaaS) model allows all organisations to invest in Workload Automation by eliminating the need for initial hardware investment and ongoing maintenance costs, and introducing predictable, transparent monthly costs.

JobExecutor provides a complete Workload Automation service, which includes all software and infrastructure hardware costs as part of the monthly subscription, coupled with premium XpertCare support from IBM's most accredited Business Partner for Workload Automation, Elyzium.

SOLUTION FEATURES

SOLUTION BENEFITS

1. Transparent monthly subscription pricing model eliminates or reduces both capex and opex when compared with an on-premise solution:

- *No upfront investment required for software licensing and hardware*
- *Removes in-house resource costs of managing workload automation*
- *No additional upgrade or ongoing maintenance costs*
- *No implementation requirements*

2. Faster time to value - typically up to 40% - than a traditional on premise workload automation solution
3. Clients gain an enterprise level solution at a fraction of the traditional cost and at very low risk to the business
4. Easily scales with business requirements since pricing is simply based on the number of jobs being run
5. Accelerates the introduction of new business applications requiring workload automation
6. Simplified management and less reliance on IT leads to greater control for business users

POWERED BY ELYZIUM

Elyzium is IBM's most highly accredited Business Partner for IBM Workload Scheduler Worldwide. Specialising in the provision, deployment, consultancy and support of on premise and Cloud-based Workload Automation solutions, our innovative offerings provide clients with more cost-effective, transparent and efficient Workload Automation environments.
